Peris: what happened

21 October 2026 | 02:21-03:20 Swedish time | About 59 minutes

Mina, Leila, Soraya, Yasmin and Roxana played in the shared world.

55	12	Stopped
actions passed	actions failed	67-action limit reached

Test checklist

What was tested	Pass	Didn't pass	Fixed
Protected logins / correct races	☑ 5	☐ 0	☐
Raid dispatch: cities and camp	☑ 5	☒ 2	☐
Battle-report accounting	☑ 6	☐ 0	☐
Army return and reload checks	☑ 4	☒ 2	☐
Recruitment queue / full-army limits	☑ 6	☐ 0	☐
Guild status, chat and invitations*	☑ 7	☒ 7	☐
Inbox inspection	☑ 22	☒ 1	☐

Counts are recorded actions, not unique bugs. Both boxes marked means mixed results. Fixed is blank because no repair of these failures was verified in this run.

*Includes existing guild status and invitation checks; it does not prove a new guild or new invitations succeeded.

Faults and why they matter

Server / verification problems (3 failed actions). Leila's reload and Soraya's next raid received server errors (HTTP 500); Mina's reload check timed out. A player cannot reliably confirm the result. The screenshots show database timeout messages; the cause is still unproven.

Map selection problem (1). Roxana's next raid could not find the expected enemy settlement. It may be a stale map or a tester targeting error; this is not a confirmed game-rule bug.

Blocked social session (8). Leila's guild and inbox controls were missing. Her screenshot shows the ruler-selection screen. These look like cascading session/tester failures, not eight proven guild bugs.

What did work: all five logins; six report checks; four return/reload checks. Recruitment was accepted twice and correctly blocked four times for a full army. Some guild/chat and inbox actions also completed.

Battle verification remains unresolved for some attempts. An idle army alone does not prove correct rewards or casualties. Overall result: **incomplete**.

To do list

- ☐ Investigate the server timeouts and reconcile uncertain raids before retrying.
- ☐ Restore/verify the logged-in screen before social actions; recheck map targets.
- ☐ Rerun the failed journeys and verify troops, loot and reload persistence.

Scope: local game build f919829 against the live shared backend; scripted bots with seeded armies. Starting balance and AI mode were not tested.

Failure screenshots

Two representative moments, selected from the 12 saved failure screenshots.

1. Soraya: raid request failed

The city is selected, but the error says "canceling statement due to statement timeout". The recorded request returned HTTP 500. No automatic resend was made.

2. Leila: social actions could not continue

During the guild step she was on ruler selection, with the same timeout message. Guilds/Messages navigation was absent. Session recovery and the server error need investigation.
