passed	didn't pass	fixed and re-tested

What was tested	Passed	Didn't pass	Fixed
Create a fresh test ruler	☑	☐	☑
Read resources and troop details	☑	☐	☐
Build Barracks with normal timer	☑	☐	☑
Train 2 soldiers; check resource charges	☑	☐	☑
Keep troops/buildings after reload	☑	☐	☐
Send and cancel a raid order	☑	☐	☐
AI chooses supported actions	☑	☐	☐
Keep playing when AI is unavailable	☑	☐	☐
Stop at time and action limits	☑	☐	☐
Stop on command; save a partial report	☑	☐	☐
Save reports, screenshots and traces	☑	☐	☑
Recover reports and damaged run locks	☑	☐	☑
Existing game tests, assets and build	☑	☐	☐
Database file generation check	☐	☒	☐

Tick = passed/fixed. X = failed. Empty = not applicable.

Fixed means a fault was repaired and checked again.

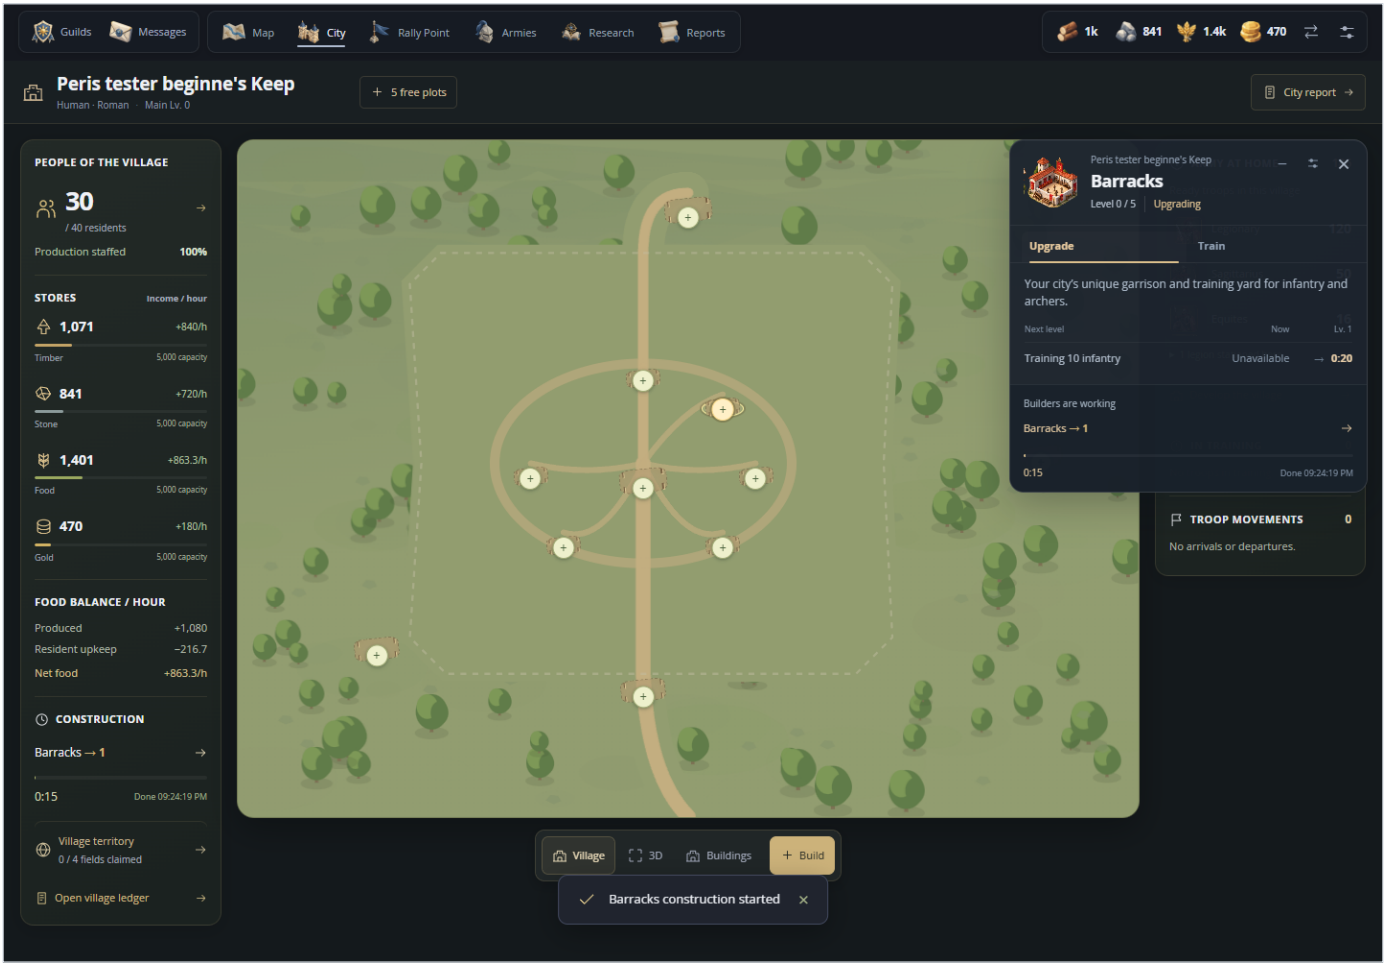

Still open: an existing database file check fails because Windows line endings do not match.

536 tests passed; 1 was skipped. Tester, browser, tooling and build checks also passed.

Not tested: Shared world login, full raid combat and mobile screens. No merge or deployment was performed.

What went wrong

Real tester fault shown below - fixed and re-tested.

Barracks check: two progress bars confused the bot, so it stopped. Fixed the check to use the building window. The game was still building normally.

Other faults - all fixed and checked again

Report saving: Windows locked a file; the readable report could be lost. Added bounded retries.

Run lock: a damaged file blocked new sessions. Added safe recovery.

Resource check: loose limits could miss a missing or doubled charge. Tightened the check.

Ruler name: the default was too long and got shortened. Matched the game limit.

To do list

- [ ] Fix the existing database file check on Windows.
- [ ] Improve: add Shared world test-account coverage.
- [ ] Improve: test completed raids, battle results and rewards.
- [ ] Improve: add mobile screen checks.
